

Agriculture, Soils, Minerals & Industries

Cropping patterns, soil types, mineral belts and industrial regions.

Portion focus ~40% · Topic: geo-india

PYQ themes: Soils & crops · Mineral distribution · Industrial regions

Why UPSC asks this

Links static geography to economy — frequent matching lists.

Soils & crops

Memorise soil–crop pairs and irrigation types. Green Revolution geography (Punjab–Haryana–Western UP) vs rainfed millets discourse. Plantation crops in specific physiographic niches.

Minerals & industry

Mineral belts drive steel, aluminium, thermal power locations. Port-based and Mumbai–Pune, Chota Nagpur, Gujarat corridor industrial stories help elimination.

Must remember

- Black soil — cotton (Deccan trap); alluvial — intensive cereals; laterite — leaching zones
- Iron belt Jharkhand–Odisha–Chhattisgarh; mica, bauxite classic states

Educational prioritisation heuristic — not an official UPSC prediction. © UPSC IAS Study Hub original notes.
