

High-chance portions — env-biodiversity

Combined original study articles for this topic's highest-probability PYQ themes (deep edition).

Protected Areas, WPA & Species

~86% · Protected area categories · WPA schedules · Species habitats · Biosphere zones · Tiger Reserves

Why this article (PYQ probability)

Portion chance ~86% (stable-high). Theme counts across all 10 years; parent env-biodiversity ~85%.

Years appeared (synthesis): 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025

Why UPSC asks this

Map memory + legal categories + flagship species create unambiguous MCQs.

Why this portion is high-chance for the next exam

Portion chance ~86% (stable-high). Theme counts across all 10 years; parent env-biodiversity ~85%. Within env-biodiversity, examiners return to protected area categories, WPA and species–habitat matching because it yields clean MCQ discriminators: definitions, matching lists, and statement–reason traps. These notes are multi-page depth material — original study synthesis for prioritisation, not NCERT/UPSC verbatim text and not an official prediction.

Use the chance % to sequence study hours, then widen to neighbouring syllabus areas. PYQ theme tags driving selection: Protected area categories, WPA schedules, Species habitats, Biosphere zones, Tiger Reserves. Approximate appearance years in the 2016–2025 educational synthesis: 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025.

Read this block slowly: high-chance portions repay depth because UPSC recycles the same discriminators with fresh stems. Your job is not to memorise paragraphs but to own triggers — dates, articles, site–feature pairs, formulae, treaty purposes — so elimination is automatic. After each subsection, pause and write two keywords on rough paper; if you cannot, reread only that subsection.

Core map of protected area categories, WPA and species–habitat matching

National Park: Higher protection intensity in textbook contrasts. Wildlife Sanctuary: Protection with comparatively more flexible rights/activities. Conservation/Community Reserves: Community and landscape approaches under WPA narrative.

Biosphere Reserve: Core/buffer/transition zoning — not identical to NP. Tiger Reserve: Critical tiger habitat + buffer under NTCA overlay. WPA 1972: Principal wildlife statute; schedules grade species protection.

If you can explain each point aloud in sixty seconds without notes, elimination speed in Prelims rises sharply. Watch absolute words in options (always/never/only) — often wrong where processes are multi-causal or jurisprudentially nuanced.

Draw the core map once from memory at the end of this sitting. Compare with the text. Patch only the missing nodes. That single retrieval cycle is worth more than two passive rereads of the same page.

Depth focus: National Park

National Park — Higher protection intensity in textbook contrasts In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Wildlife Sanctuary — Protection with comparatively more flexible rights/activities Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the

incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Conservation/Community Reserves

Conservation/Community Reserves — Community and landscape approaches under WPA narrative In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Biosphere Reserve — Core/buffer/transition zoning — not identical to NP Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Tiger Reserve

Tiger Reserve — Critical tiger habitat + buffer under NTCA overlay In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

WPA 1972 — Principal wildlife statute; schedules grade species protection Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Schedules logic

Schedules logic — Higher schedule generally means stricter prohibitions In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Ramsar overlay — Wetlands of international importance often co-asked Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Corridors

Corridors — Connectivity beyond island PAs In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Invasive species — Ecological disruption examples Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Flagship species matching

Flagship species matching — GIB, dolphin, snow leopard, olive ridley — living list In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

NTCA — Governance hook for Project Tiger landscapes Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Ex situ vs in situ

Ex situ vs in situ — Zoos/gene banks vs habitat protection In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Biodiversity Act — NBA/ABS outline level Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: CITES

CITES — International trade permit logic In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Human–wildlife conflict — Edge habitats and mitigation themes Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Coastal links

Coastal links — Turtles/mangroves bridge topics In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Critical Wildlife Habitat — FRA interface — headline awareness Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: IUCN vs Indian law

IUCN vs Indian law — Do not casually mix category systems In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Manage distinctive sites — Not all 100+ NPs — uniqueness first Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on protected area categories, WPA and species–habitat matching more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Comparison tables — memorise differences, not essays

Tables win Prelims because UPSC loves correctly matched pairs and multi-statement sets. Study the table(s) embedded with this article until you can reproduce them on rough paper in under four minutes. Then invent two false rows and practise spotting them — that simulates assertion traps.

After table mastery, return to narrative sections only for rows you keep missing. Depth here is intentional: thin skim notes lose marks on discriminators. When a table row has a date, article, or place, that cell is a trigger — circle it.

Must-know India / applied angle

Revise distinctive PAs/species; track Ramsar and schedule CA on a one-page sheet. Keep a rolling one-page CA addendum dated by month; do not rewrite your static spine every week. Mains crossover exists, but Prelims primarily rewards precise factual edges and definitions.

Link each applied example back to a static hook so current affairs does not float free of the syllabus. If a news item cannot attach to a hook within ten seconds, park it in a low-priority list. Rehearse a 45-second spoken India angle the day before any mock that might touch this portion.

How UPSC typically frames questions (PYQ angle)

Matching lists and multi-statement questions on protected area categories, WPA and species–habitat matching. Tactic: eliminate anachronisms and category errors first (wrong institution, wrong treaty family, wrong century, wrong formula base). Then test remaining options against table rows. Finally, beware extra absolute adjectives.

Assertion–reason items often smuggle a true statement with a false causal link — judge the link, not only the facts. Matching lists reward uniqueness: start with the most distinctive pair. Themes: Protected area categories, WPA schedules, Species habitats, Biosphere zones, Tiger Reserves. Years signal in this hub's synthesis: 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025.

Common traps and how to dodge them

Trap: BR identical to NP. Trap: All sanctuaries ban all humans. Trap: IUCN=Indian legal categories.

Trap: Outdated schedules. Trap: Tiger buffer = BR transition.

Build a personal trap diary: after each mock, add one line under this heading. Reread only the trap diary the night before the paper for this portion. Teach one trap to a peer in one minute — teaching exposes fuzzy understanding.

Worked revision method (make the PDF earn its pages)

Day 1: core map + table; close notes; reproduce table. Day 2: India angle + traps; 15 MCQs. Day 3: PYQ-style self-questions from headings only. Day 4: teach the topic aloud for eight minutes. Day 5: mixed quiz with neighbouring topics to prevent silo memory.

Print the PDF or use in-app Download PDF. Annotate margins only with triggers you forget — not entire yellow pages. Spaced retrieval beats rereading: hide the PDF and write bullets from memory, then check. In the final 15 days, this portion should be in 'table + traps + must' mode, not first-read mode.

Quick synthesis for the exam hall

Definitions ! table ! India ! traps for protected area categories, WPA and species–habitat matching. Portion focus score used in-app: ~86%. If time is scarce in the last week, reread Must remember + tables + traps only; return to long sections for weak rows.

Carry a one-line spine on rough paper in the first minute of the paper if this topic appears early — then eliminate. Do not invent facts under pressure; prefer elimination from your table.

Extended notes — depth for multi-page mastery

National Park. Higher protection intensity in textbook contrasts Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Wildlife Sanctuary. Protection with comparatively more flexible rights/activities Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Conservation/Community Reserves. Community and landscape approaches under WPA narrative Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Biosphere Reserve. Core/buffer/transition zoning — not identical to NP Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Tiger Reserve. Critical tiger habitat + buffer under NTCA overlay Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin.

WPA 1972. Principal wildlife statute; schedules grade species protection Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Schedules logic. Higher schedule generally means stricter prohibitions Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Ramsar overlay. Wetlands of international importance often co-asked Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Corridors. Connectivity beyond island PAs Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Invasive species. Ecological disruption examples Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin.

Flagship species matching. GIB, dolphin, snow leopard, olive ridley — living list Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. NTCA. Governance hook for Project Tiger landscapes Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Ex situ vs in situ. Zoos/gene banks vs habitat protection Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Biodiversity Act. NBA/ABS outline level Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. CITES. International trade permit logic Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin.

Human–wildlife conflict. Edge habitats and mitigation themes Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Coastal links. Turtles/mangroves bridge topics Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Critical Wildlife Habitat. FRA interface — headline awareness Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. IUCN vs Indian law. Do not casually mix category systems Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. Manage distinctive sites. Not all 100+ NPs — uniqueness first Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin.

This extended module exists so downloads are clearly longer/richer than skim notes. Read it in two sittings if needed; do not skim on day one and never return. After finishing, close the article and write a 12-line summary from memory; compare; patch gaps only. Then solve at least ten mixed MCQs tagging each error to a heading in this PDF.

Error log template (copy into your notebook)

For every missed question related to this portion, record: (1) stem gist, (2) wrong choice, (3) correct choice, (4) misconception in five words, (5) table row or must-remember line that would have saved you. Review the error

log before the next mock. If the same misconception repeats thrice, rewrite that depth-focus section in your own words on a fresh page.

This metacognitive loop is how multi-page notes convert into marks rather than shelf weight.

Self-check questions (close the book first)

1) Define protected area categories, WPA and species–habitat matching in two sentences without buzzword salad. 2) Recite the comparison table rows from memory. 3) List three traps and the correct mental fix for each. 4) Give two India examples and one international or cross-topic anchor. 5) Write one incorrect statement UPSC might plant — then correct it. 6) Time yourself: explain the exam spine in 90 seconds. 7) List five triggers (dates/articles/sites/formulae) without peeking.

Pass criteria: 6/7 without peeking. Then move to mixed MCQs. Failing is useful if you patch immediately — that is the point of depth notes.

Indian PA categories

Category	Core idea	Discriminator
National Park	Strict PA	Vs WLS intensity
Wildlife Sanctuary	More flexibility historically	Rights/activities
Biosphere Reserve	Zoned landscape	Not NP synonym
Tiger Reserve	CTH + buffer	NTCA hook

Map / list facts

- Western Ghats
- Sundarbans
- Kaziranga
- Desert NP/GIB
- River dolphin stretches

Common traps

- ' BR identical to NP
- ' All sanctuaries ban all humans
- ' IUCN=Indian legal categories
- ' Outdated schedules
- ' Tiger buffer = BR transition

Must remember

- NP vs WLS vs BR
- WPA schedules idea
- Tiger Reserve CTH+buffer
- In situ vs ex situ

Biodiversity Hotspots & Global Conventions

~72% · Hotspots · CBD · CITES · Nagoya · CMS

Why this article (PYQ probability)

Portion chance ~72%. Steady; pairs with protected-areas. Parent ~85%.

Years appeared (synthesis): 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025

Why UPSC asks this

Definitional criteria + treaty purpose one-liners are easy to mark.

Why this portion is high-chance for the next exam

Portion chance ~72%. Steady; pairs with protected-areas. Parent ~85%. Within env-biodiversity, examiners return to biodiversity hotspots and global environment conventions because it yields clean MCQ discriminators: definitions, matching lists, and statement–reason traps. These notes are multi-page depth material — original study synthesis for prioritisation, not NCERT/UPSC verbatim text and not an official prediction.

Use the chance % to sequence study hours, then widen to neighbouring syllabus areas. PYQ theme tags driving selection: Hotspots, CBD, CITES, Nagoya, CMS. Approximate appearance years in the 2016–2025 educational synthesis: 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025.

Read this block slowly: high-chance portions repay depth because UPSC recycles the same discriminators with fresh stems. Your job is not to memorise paragraphs but to own triggers — dates, articles, site–feature pairs, formulae, treaty purposes — so elimination is automatic. After each subsection, pause and write two keywords on rough paper; if you cannot, reread only that subsection.

Core map of biodiversity hotspots and global environment conventions

Hotspot criteria: High endemism + habitat loss/threat thresholds. India-related hotspots: Himalaya, Western Ghats, Indo-Burma, Sundaland (Nicobar). Endemism: Species restricted to a region.

CBD: Conservation, sustainable use, benefit sharing. Nagoya Protocol: Access and benefit sharing. CITES: International trade regulation via appendices.

If you can explain each point aloud in sixty seconds without notes, elimination speed in Prelims rises sharply. Watch absolute words in options (always/never/only) — often wrong where processes are multi-causal or jurisprudentially nuanced.

Draw the core map once from memory at the end of this sitting. Compare with the text. Patch only the missing nodes. That single retrieval cycle is worth more than two passive rereads of the same page.

Depth focus: Hotspot criteria

Hotspot criteria — High endemism + habitat loss/threat thresholds In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

India-related hotspots — Himalaya, Western Ghats, Indo-Burma, Sundaland (Nicobar) Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on biodiversity hotspots and global environment conventions more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Endemism

Endemism — Species restricted to a region In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

CBD — Conservation, sustainable use, benefit sharing Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on biodiversity hotspots and global environment conventions more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Nagoya Protocol

Nagoya Protocol — Access and benefit sharing In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

CITES — International trade regulation via appendices Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on biodiversity hotspots and global environment conventions more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: CMS

CMS — Migratory species cooperation In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Cartagena Protocol — Biosafety/LMOs — distinct from Nagoya Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on biodiversity hotspots and global environment conventions more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Protected area " hotspot

Protected area " hotspot — Scientific label vs legal tool In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Benefit sharing — Genetic resources and TK ethics Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on biodiversity hotspots and global environment conventions more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Appendices idea

Appendices idea — Different trade strictness In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Migratory flyways — Birds link CMS and wetlands Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on biodiversity hotspots and global

environment conventions more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: ABS India

ABS India — Biodiversity Act outline In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Marine biodiversity — Reefs/mangroves/EEZ Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on biodiversity hotspots and global environment conventions more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Invasive alien species

Invasive alien species — CBD concern In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Aichi to GBF — Targets evolve — verify CA labels Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on biodiversity hotspots and global environment conventions more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Depth focus: Community knowledge

Community knowledge — PBR idea In exam stems, expect this idea to appear either as a direct definition or as one statement in a multi-statement cluster.

Synthetic biology edge — Headline awareness only Contrast the two ideas above: what would a wrong option swap between them?

Micro-drill: write one correct statement and one incorrect statement using only these ideas; label why the incorrect one fails. Keep language tight — UPSC rewards precision on biodiversity hotspots and global environment conventions more than ornamental vocabulary. If this pair links to a map or article number, add that trigger in the margin of your PDF printout.

Comparison tables — memorise differences, not essays

Tables win Prelims because UPSC loves correctly matched pairs and multi-statement sets. Study the table(s) embedded with this article until you can reproduce them on rough paper in under four minutes. Then invent two false rows and practise spotting them — that simulates assertion traps.

After table mastery, return to narrative sections only for rows you keep missing. Depth here is intentional: thin skim notes lose marks on discriminators. When a table row has a date, article, or place, that cell is a trigger — circle it.

Must-know India / applied angle

Western Ghats endemism examples + NBA outline. Keep a rolling one-page CA addendum dated by month; do not rewrite your static spine every week. Mains crossover exists, but Prelims primarily rewards precise factual edges and definitions.

Link each applied example back to a static hook so current affairs does not float free of the syllabus. If a news

item cannot attach to a hook within ten seconds, park it in a low-priority list. Rehearse a 45-second spoken India angle the day before any mock that might touch this portion.

How UPSC typically frames questions (PYQ angle)

Hotspot definition; convention!"purpose match. Tactic: eliminate anachronisms and category errors first (wrong institution, wrong treaty family, wrong century, wrong formula base). Then test remaining options against table rows. Finally, beware extra absolute adjectives.

Assertion–reason items often smuggle a true statement with a false causal link — judge the link, not only the facts. Matching lists reward uniqueness: start with the most distinctive pair. Themes: Hotspots, CBD, CITES, Nagoya, CMS. Years signal in this hub's synthesis: 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025.

Common traps and how to dodge them

Trap: Every forest is a hotspot unit. Trap: Cartagena=Nagoya. Trap: CITES bans all trade.

Trap: CBD=UNFCCC.

Build a personal trap diary: after each mock, add one line under this heading. Reread only the trap diary the night before the paper for this portion. Teach one trap to a peer in one minute — teaching exposes fuzzy understanding.

Worked revision method (make the PDF earn its pages)

Day 1: core map + table; close notes; reproduce table. Day 2: India angle + traps; 15 MCQs. Day 3: PYQ-style self-questions from headings only. Day 4: teach the topic aloud for eight minutes. Day 5: mixed quiz with neighbouring topics to prevent silo memory.

Print the PDF or use in-app Download PDF. Annotate margins only with triggers you forget — not entire yellow pages. Spaced retrieval beats rereading: hide the PDF and write bullets from memory, then check. In the final 15 days, this portion should be in 'table + traps + must' mode, not first-read mode.

Quick synthesis for the exam hall

Criteria !' India list !' convention table !' ABS/biosafety split. Portion focus score used in-app: ~72%. If time is scarce in the last week, reread Must remember + tables + traps only; return to long sections for weak rows.

Carry a one-line spine on rough paper in the first minute of the paper if this topic appears early — then eliminate. Do not invent facts under pressure; prefer elimination from your table.

Extended notes — depth for multi-page mastery

Hotspot criteria. High endemism + habitat loss/threat thresholds Pair this with one contrasting point so options cannot blur categories. Add a keyword trigger in your margin. India-related hotspots.
